~Background~

A previous student had gone on a weekend trip with family. While on the trip the students' father became unresponsive. No breathing was witnessed and no pulse was felt. The student was able to send someone to call 911, and another to direct EMS to the scene. They were able to then direct additional bystanders to assist lowering him to the ground and perform CPR. After initiating CPR, the student was able to restore a heartbeat and the father regained consciousness.

Thank you: We would like to thank the student for sharing their story with us and applaud their courage in a time of crisis to help save a life.

Congratulations: A special thank you and congratulations go out to Jackie. Your dedication to the AHA, your community has helped save a life.
